# Solihull Approach Training Offer

The Solihull Approach model combines three theoretical concepts, containment (psychoanalytic theory), reciprocity (child development) and behaviour management (behaviourism). It provides a framework for thinking for a wide range of professionals working with families with babies, children and young people. This evidence-based approach can be used in one-to-one interventions and group work. It can be helpful as an early intervention model and is also used in preventative work or where difficulties are already present.
